

Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	OROVILLE HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106040937
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/29/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	www.orovillehospital.com/how-we-compare/health-equity

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce>

-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

30610

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	29159	30610	95.3
Spanish Language	899	30610	2.9
Asian Pacific Islander Languages	512	30610	1.7
Middle Eastern Languages	12	30610	0
American Sign Language	suppressed	30610	suppressed
Other Languages	suppressed	30610	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

N

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health

information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

N

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

N

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

N

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

N

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

0

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

0

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

0

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	0	0	0	0
Housing Instability	0	0	0	0
Transportation Problems	0	0	0	0
Utility Difficulties	0	0	0	0
Interpersonal Safety	0	0	0	0

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

393

Total number of respondents to HCAHPS Question 19

491

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

80

Total number of people surveyed on HCAHPS Question 19

3069

Response rate, or the percentage of people who responded to HCAHPS Question 19

16

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					
Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					
Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					
Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					
Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Gender Identity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

383

Total number of respondents to HCAHPS Question 17

491

Percentage of respondents who responded "yes" to HCAHPS Question 17

78

Total number of people surveyed on HCAHPS Question 17

3069

Response rate, or the percentage of people who responded to HCAHPS Question 17

16

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:

<https://qualityindicators.ahrq.gov/>

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

31

Total number of hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

973

Rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

31.9

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_\(VBAC\)_Delivery_Rate_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

2124

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

9291

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

22.9

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Asian	16.3	1.3

Plan to address disparities identified in the data

Oroville Hospital is committed to improving patient health outcomes and reduce health-care disparities. We will conduct a multidisciplinary analysis of the health equity data to better understand where we can make a significant impact, aiming to reduce disparities for all patients, especially those highlighted in the report. This work will continue through 2026, with ongoing reviews to ensure the goals identified are met. By using evidence-based, equity focused strategies, we aim to enhance patient satisfaction and community trust. Disparity 1 and 2 are all-cause unplanned 30-day hospital readmission rate for Medicare and Medicaid patients. Disparity 3 - 7 focuses on all-cause unplanned 30-day readmission rate with a stratification identifying ages 35 and above, along with White, Black or African American. Disparity 8 is Agency For Healthcare Research and Quality (AHRQ) quality indicator pneumonia mortality rate, male. Disparity 9 is all-cause unplanned 30-day hospital readmission rate, stratified by behavioral health diagnosis (no behavioral health diagnosis), male. Disparity 10 is all-cause unplanned 30-day hospital readmission rate, Hispanic or Latino. Oroville Hospital will develop a plan by evaluating the needs of the identified population, which will be modified based on the effectiveness of the strategy and emerging data. Together, hospital administration will meet regularly to monitor progress, address gaps, and drive continuous improvement, reflecting our commitment to equitable care for all patients.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific

timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At Oroville Hospital we put patients first. We know how important it is to be able to trust and depend on your medical provider. That is why our top priority is driven by giving patients quality care in a safe and friendly environment. We have a dedicated team that continually works on ways to improve patient safety through initiatives and outreach programs. ð

In FY24, Oroville Hospital engaged in activities and programs that addressed the priority health needs identified in the Community Health Improvement Plan, also called the Implementation Strategy. Through a commitment of community benefit programs and resources, Oroville Hospital chose to address the following: affordable healthcare, heart health, mental health, substance abuse, obesity and diabetes, and economic insecurity and poverty.

Patient safety

The Patient Safety Department is committed to the quality of care and safety of our patients. We continuously look for ways to improve care, decrease errors and strive to exceed your expectations. The safety of our patients is our top priority and is embraced by the entire organization. We coordinate with all departments to promote the goal of improved medical care and patient satisfaction. We take quality and safety seriously at Oroville Hospital. ð

Fall Preventionð

To protect patients from accidental falls and mishaps, our nursing staff routinely raise hospital rails. Hospital stays are often accompanied by changes in physical abilities as a result of illness, surgery or medication. When getting into or out of bed, preparing to walk or moving from bed to chair, nurses or nursing assistants are available to help if a patient is unsure of their ability to manage on their own. ð

Infant and Child Safetyð

Oroville Hospital uses cribs, or beds with side rails as a means of ensuring the safety of infants and children. In addition, our nursery and obstetrics units are locked for the baby's safety. ð

Smokingð

Oroville Hospital operates as a smoke-free facility. Smoking is not permitted in hospital buildings. For the comfort and health of patients and visitors, patients and visitors are prohibited from smoking within 50 feet of any hospital entrance or entryway. ð

Safety Preparedness Drillsð

To keep our staff members up-to-date on safety procedures, our hospital conducts periodic and annual drills, including fire extinguisher training. At regular intervals, we also test our fire alarm system by ringing alarm bells and closing fire doors. ð

Crisis Care Guidelinesð

The Oroville Hospital Emergency Operations Plan addresses surge operations and crisis contingencies. Oroville Hospital Executive Leaders are trained and follow the Hospital Incident Command System. This includes response to various levels of disaster, including Crisis level. This ensures that patients are receiving the best quality of care, no matter the circumstances.

Addressing patient social drivers of health

Oroville Hospital operates Plumas House, a care facility established to support patients who are displaced or homeless after their discharge from the hospital. Plumas House provides a safe and supportive environment for patients to recover and heal. In 2024, 78 Plumas House residents had 24/7 direct care, daily meal service, transportation to medical and dental appointments, and access to resources to help meet their needs.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Oroville Hospitals Fast Response Stroke Program is a perfect example of our efforts in the area of effective treatment. Our Stroke Team is committed to stroke prevention, education, and treatment. This team approach to stroke care was created to provide the quality treatment and care necessary for stroke patients to minimize the effects of a stroke and help them return to a healthy, happy life. Oroville Hospital is a qualified Primary Stroke Center, as designated by the Sierra-Sacramento Valley Emergency Medical Services Agency and has received the American Stroke Association/American Heart Association Gold Plus award to the last 13 or 14 (need to check) years in row. The Stroke Team works with the paramedics through the Sierra-Sacramento EMS system to quickly identify stroke symptoms so the team can prepare for patients before they even arrive at the hospital. Quick diagnosis of stroke through a CT (computed topography) scan shows the type of stroke and determines the course of treatment including IV thrombolysis when indicated. Additionally, the Oroville Hospital Stroke Team is dedicated to stroke prevention through awareness and education. The board certified team adheres to the protocols from the American Stroke Association to increase its success rate in stroke treatment. By increasing public awareness, the Oroville Stroke Team helps the public determine when someone is having a stroke so they can take action quickly.

The Stroke Program at Oroville Hospital provides an exemplary standard of care, based on advanced medical research. The stroke team approaches care with a strong multidisciplinary team that looks at stroke symptoms at every angle and provides continual care from the hospital stay to home. These practices foster better outcomes through properly and efficiently caring for stroke patients.

Care coordination

Patients who are established with an Oroville Hospital primary care provider, who have two or more chronic conditions (i.e. hypertension, coronary heart disease, high cholesterol) are offered enrollment in the Chronic Care Management program. This program utilizes a team of medical Assistants who work closely with primary care providers to encourage patients to take preventative measure, keep up with health screenings, and assist with medication refills. Ⓓ

Patients who are established with an Oroville Hospital Cardiologist and diagnosed with hypertension are eligible for the Remote Patient Monitoring Program. Patients are provided with a free blood pressure monitor that allows a clinical team to remotely monitor a patient's blood pressure on a regular basis, and support the patient in managing their hypertension.

Access to care

Oroville Hospital reduced accessibility barriers to vaccines through drive-through flu clinics, making it easier for those who may be more vulnerable and older generations, to receive vaccines. Drive-through access protects the whole community. The annual flu events were held in October and November of 2024, providing over 500 vaccines to the community. Vaccinations were available to community members 12 years and older, from the comfort of their vehicles. A booth was also available for walk-up flu vaccination. Ⓓ

With a large patient base traveling from the Yuba City area, in 2023, Oroville Hospital opened the Yuba City Multispecialty Clinic, offering great outlets for comprehensive care. Yuba City Multispecialty provides a seamless continuum of care, ensuring that health needs are met comprehensively under one clinic. Ⓓ

When needed, Oroville Hospital provides inpatient transport to local psychiatric care hospitals. Drivers are crisis intervention-certified and available 24 hours a day, 7 days a week. In 2024, there

was over 4,600 patients transported overall for the hospital. Oroville Hospital's non-urgent medical transportation ensures patients can access outpatient care even if they lack access to reliable transportation, have an unmet need for transport, or face financial, physical, or logistical barriers such as not having a vehicle or driver's license. This benefit supports vulnerable populations, including those with chronic conditions or limited mobility, by removing barriers to necessary treatment, improving health outcomes, and promoting health equity.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
